INTERACTIVE MODULAR EDUCATIONAL SYSTEM

Abstract of the Disclosure

An interactive modular educational system. This invention provides for an interactive modular educational system comprised of a deck of visually-enhanced cards designed to allow users to learn important business-related techniques, tactics, and strategies. The cards, divided into sections based upon different business principles, utilize color schemes, similarly sounding word endings, acronyms, and clever sketches to allow the user to learn or improve upon a variety of business disciplines. The system, which can be used randomly, modularly, or sequentially, provides an easy-to-use, easy-to-understand method of learning and remembering valuable business techniques.
